

CSS Notes – List Styling & nth-child

1. List Styling

- 1 list-style-type – Changes the marker type (disc, circle, square, decimal, lower-roman, etc.)
- 2 list-style-position – Positions marker inside or outside
- 3 list-style-image – Uses an image as a marker

Example:

```
ul { list-style-type: square; list-style-position: inside; }
```

2. Ordered List Attributes

- 1 start – Starts numbering from a specific value
- 2 reversed – Displays list in descending order
- 3 value – Sets a specific number for a list item

3. nth-child()

Used to select elements based on their position. li:nth-child(2) – Selects second item
li:nth-child(odd) – Selects odd items li:nth-child(even) – Selects even items

4. ::marker

Used to style list markers. li::marker { color: red; font-size: 20px; }
